**Is your pet 8+ years old?**

***Help them live a longer, healthier and happier life with a free nurse health check***

**As our beloved pets get older, they become vulnerable to certain age related health conditions. Often, they lack the ability to tell us that they don't feel 100%, or are even able to hide the early clinical symptoms from us.**

We at **House & Jackson** would like to help them live happier, healthier and longer lives, and to ensure that as they get older, they receive the love, care and attention they deserve. Regular health checkups help us to spot any signs of concern as early as possible.

Our Senior Animal Health Check offers a **free 30-minute consultation** with one of our qualified Veterinary nurses, to identify and manage any possible long-term problems with early intervention. Our nurse clinics for senior pets include a physical examination alongside clinical history. Weight, mobility and behavioral changes will all be considered, and should our nurse recognise a problem, they will work closely with our vets to investigate and address these concerns.

If your pet is 8 years or more, book your **FREE Senior Animal Health consultation** with a **Registered Veterinary Nurse**. Where necessary, you will be referred to one of our Vets for further assessment and any appropriate treatment.

**Call our Reception team now to book your FREE Senior Health Check!**

If referred to a Vet, a 25% discount will be applied to the initial Vet consultation, blood tests, and blood pressure measurement\* A urine test will be free.

Where the Vet suggests Hydrotherapy, a free taster session may be offered.

(\*applicable to a geriatric blood profile and Doppler blood pressure measurement)
